

CNZ Cylinder Rod

Hydraulic=H (air cylinder no entry)

Length (mm)

diameter tolerance (17 no entry)

diameter (mm)

Rod type

- (Material) : 45#

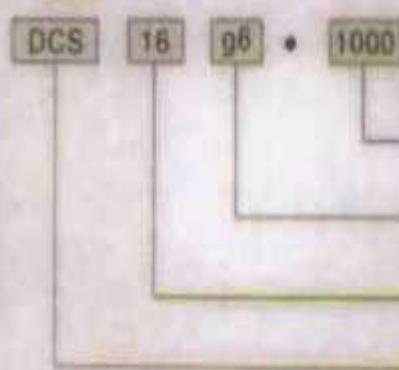

- (Main Use) :

- (Specification) : $\phi 4-\phi 80$

- Tolerance: f7, f8

- (Maximum Length) : 6M

CNZ Machine Shaft

Length (mm)

tolerance (g6 no entry)

diameter (mm)

shaft type

- (Material) : 45#

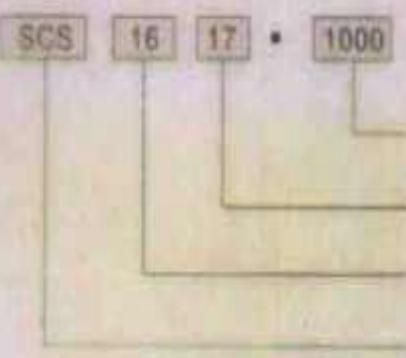

- Main use: be used wood machine, food machine automatic machine etc.

- Tolerance: g6, f7, f8

- (Maximum Length) : 6M

CNZ Stainless Steel Machine Shaft

Length (mm)

tolerance (17 no entry)

diameter (mm)

Stainless shaft type

- (Material) : 35#

- Main use: printing machine, special oil cylinder, packing machine, automatic cutting machine etc.

- Tolerance: g6, f7, f8

- (Specification) : $\phi 4-\phi 80$

- (Maximum Length) : 6M

CNZ Linear shaft Series

| Type | Description | Material | Type |
|---------------------|--|-----------------|--------------------------------------|
| Standard Shaft |  | Gcr15 | SF SFC |
| Stainless Shaft |  | SUS440 | SSF |
| Standard Pipe Shaft |  | Gcr15 | PSF PSFC |
| Tapped Shaft |  | Gcr15 or SUS440 | TSF TSFC TSSF TPSF TPSFC |

The high precision shaft has a lot of application together with automatic moving facility such as industrial robot, measuring instrument, medical instrument, precision machine, pneumatic cylinder rod, automation slide system etc.

Stainless steel: As the stainless shafts are highly anti-corrosive, that are most appropriate for use in the easily oxidizing environments such as water, chemical, vapor and sea water and so on.

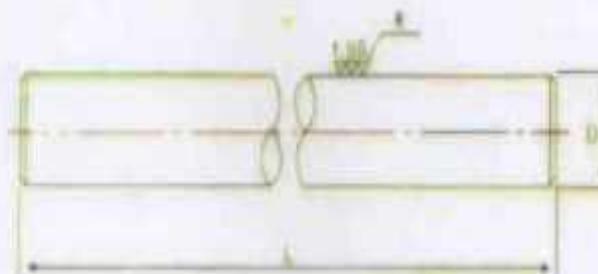

PIPE SHAFT: The pipe shafts contribute greatly to reducing weight and simplification of the equipment due to their pipe structure of which the inner are suitable for electric wiring for measurement, compressed air piping operation, lubricate and hydraulic piping or robot arms.

Hole positions can be provided in accordance with the requirement of customers.

| | | | | | | | | | | | | | | | | | |

● We may accept requests for other major diameter tolerances.

● Material: SF, SFC shaft High-carbon chromium bearing steel (GCr15); SSF shaft stainless steel shaft (SUS440)

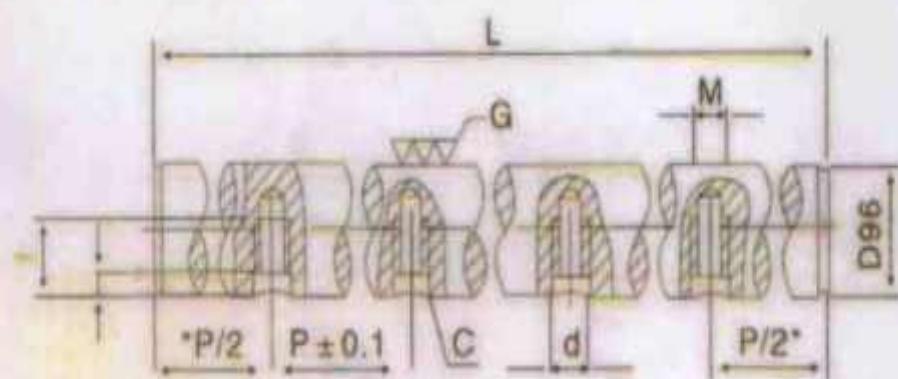

● Hardness: SF, SFC shaft HRC58~64 or more; SSF shaft HRC above 56

CNZ Tapped Linear Shaft Series

SFT,SFSST

If a deflection or other precision problem develops with a shaft because of a high or unbalanced load, the shaft may no longer maintain its functions. In this case, selecting another shaft with a larger diameter is an option; the best possible method would be using a shaft tapped on its center line (generatrix) in combination with an TBR/SBR type rail support. The center line tapped shafts have been standardized for easier selection.

Note:

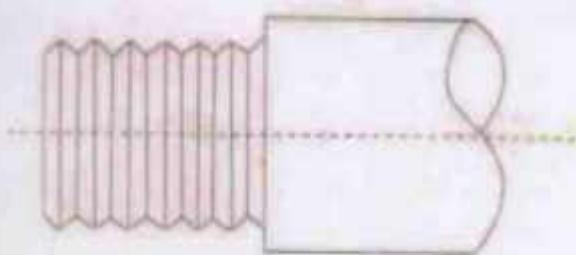

Dimensions marked with an asterisk * are not always $P/2$, depending on the overall length.

| Diameter | Type | Pitch | Nominal screw size | Tap depth | Maximum length |
|----------|-------|-------|--------------------|-----------|----------------|
| D | | P | M | I | L |
| 10 | SFT10 | 100 | M4x0.7 | 4.5 | 1500 |

■ Special Machining for Shaft

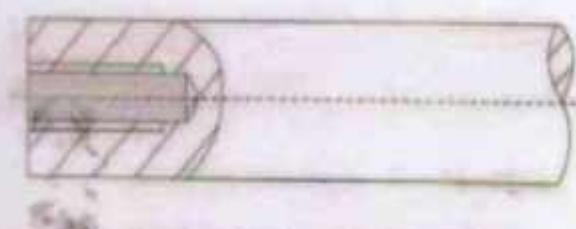

When you are special requirements on machining, such as threading, coaxial holes drilled and tapped, radial holes drilled and tapped, reduced shaft diameter etc, we can machine for you, and these special machines are finished after heat treatment and hard chromic so that ensure the precision of product. send us your detailed sketch or blue print for product quotation and action, you will be satisfied with our service.

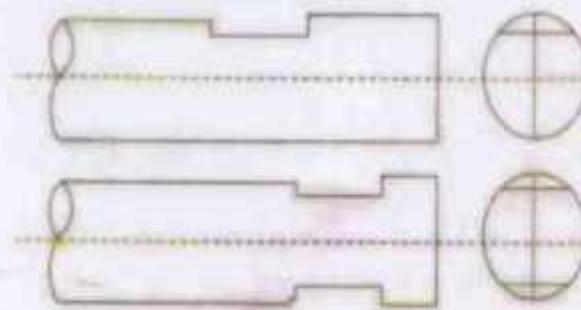

Threading

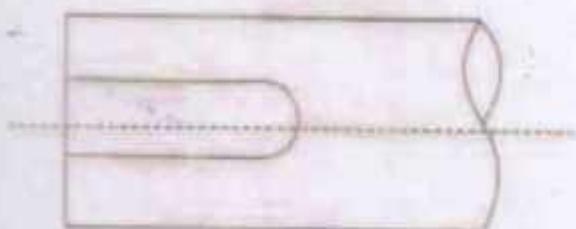

Reduced shaft diameter

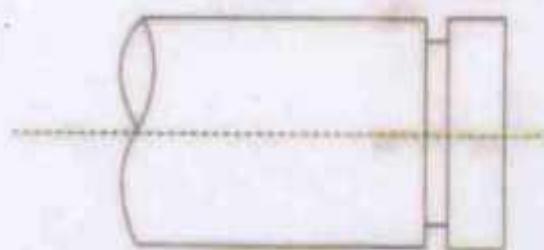

Coaxial holes drilled and tapped

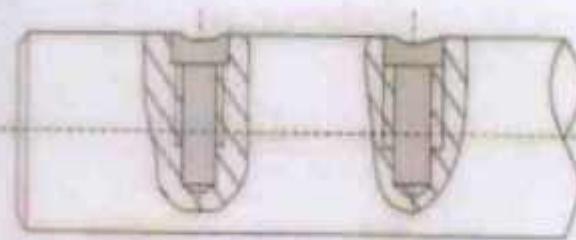

Flats-single or multiple

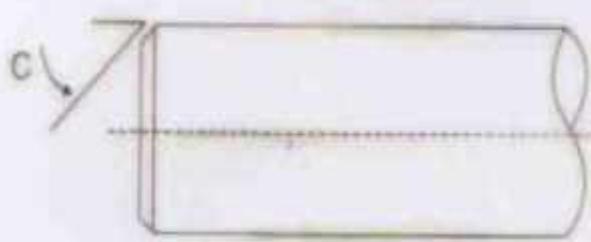

Key way

Snap ring grooves

Radial holes drilled and tapped

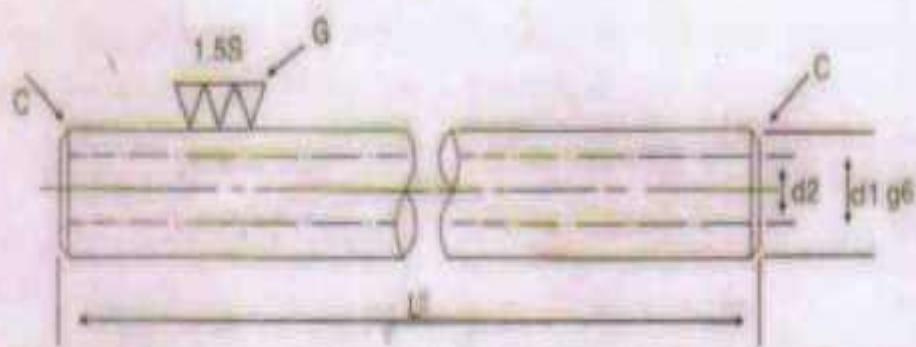

Standard chamfer is 45° but
another angle is also available

Pipe Linear Shaft Series

We may accept requests for other major diameter tolerances.

• **Material:** High-carbon chromium bearing steel (GCr15)

Surface roughness - 10

■ PSCC (PSC + bland Chromic Platting)

Linear Shaft Series

■ Heat Treatment

The slide shafts are annealed, quenched and tempered by processing techniques and skills developed. The heat treatment assures the slide shafts uniform hardness in both radial and axial directions, developing an appropriate hardened layer.

The martensite stainless steel (SUS440C) is also subjected to a sophisticated heat treatment to suppress distortion, assuring a uniform hardened layer and sufficient hardness.

■ High-frequency heat treatment

Heat treatment by induction heating using a radio frequency is called high-frequency heat treatment. This treatment is used mainly for surface quenching, it has been also used for annealing and tempering more recently.

■ Carburizing

Carburizing is a treatment to make carbon diffuse over the surface of steel and permeate the steel. Quenching a steel product after carburizing hardens the surface, providing the product with both a corrosion resistant surface and a core of considerable toughness.

■ Shaft hardness

The surface of the shaft is induction hardened to a depth of at least 0.4 up to 3.2mm, depending on the shaft diameter. Surface hardness and depth of hardness are extremely uniform, both in the radial and axial dimensional consistency and the long service life of Precision Steel Shafts.

Please contact us to obtain the depth of hardness for corrosion-resistant steel shafts.
